Response to Amendment

1. The amendments filed 08/20/2003 have been entered.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 35, 36 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Schmitt (U. S. Patent 4290695).

Schmitt discloses a method and apparatus for measuring the transmittance of radiation in water, the system comprising:

- a module 28 including a source of radiation 31
- a module 66 including two radiation sensors; radiation sensor 68 detecting radiation having intensity I_{D1} and a second detector detecting radiation having intensity I_{SD1} (see Fig.7)

whereby the radiation detectors, as clearly shown in Fig.7, are positioned at different distances from the radiation source 31 and both radiation detectors are capable of detecting radiation coming from the source 31.

The system including the source and detector module when submersed in water can be used to calculate the transmittance of radiation through the water.

Claim Rejections - 35 USC § 103

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

6. Claims 37-39 are rejected under 35 U.S.C. 103(a) as being unpatentable over Schmitt and further in view of Richardson et al. (U. S. Patent 5242602).

Schmitt fails to disclose that the system is used in a fluid/water treatment/purification system, however according to Richardson a similar system is used for water purification and as such using the device of Schmitt in a water purification system constitutes only a matter of design choice.

Allowable Subject Matter

7. Claims 1, 11, 13-22, 31, 33, 34 are allowed.

8. The following is a statement of reasons for the indication of allowable subject matter: The amendments made by the Applicant to more clearly define the radiation field thickness, namely, that it is the distance between the boundary element and the radiation source, as well as to specify that both the source and the detector are stationary and thus the field thickness is changed by changing the distance between the radiation source and the boundary element, render the claims allowable over the prior art.

Response to Arguments

9. Applicant's arguments with respect to claims 35-39 have been considered but are moot in view of the new ground(s) of rejection.
